TASK 1

INTRODUCTION TO OOP, CLASSES, AND OBJECTS

→ THEORETICAL GOALS (Read & Write in Your Own Words)

1. What is **Object-Oriented Programming (OOP)**?
2. Why is OOP important in **Python** and **AI**?
3. Understand these **Core Concepts**:
    - **Class**
    - **Object**
    - **Instance**
    - **Method**
    - **Attribute**

Write 2–3 lines about each concept **in your own words** (not copy-pasted). This will help you build a strong foundation.

→ PRACTICAL CODING TASK

❖ Task 1.1: Create a Car Class

Create a class named Car with the following:

- Attributes: brand, color
- Method: display_info() to print brand and color

Create two objects of Car with different values and display their info.

python

Code Example For You:

```python
class Car:
    def __init__(self, brand, color):
        self.brand = brand
        self.color = color

    def display_info(self):
        print(f"Brand: {self.brand}, Color: {self.color}")

car1 = Car("Toyota", "Red")
car2 = Car("Honda", "Blue")

car1.display_info()
car2.display_info()
```

❖ **Task 1.2: Create a Student Class**

Your Own Practice:

- Class: Student
- Attributes: name, age, grade
- Method: get_details() to print student info

🎁 **BONUS TIPS**

- Type every line of code yourself **don't copy-paste**.
- Use # comments to explain each line in **your own words**.
- Draw the structure of a class and object on paper if it helps.

📅 **DEADLINE: Complete by Today 11th May 11:59 PM**

Once you complete:

- Reply **"Day 1 Completed ✅"**
- I will send you **Task 2** with a new concept!
